

Nutrient Counts Guidance

What are nutrient counts used for?

The below information can be used for pupils with metabolic conditions whereby they monitor their nutrient intake, such as Diabetes, PKU, Cystic Fibrosis or Prader Willi.

How to use these?

Nutrient Counts provide nutrition data for each recipe served, including Carbohydrate, Fat, Protein and Calories. This data is for the final (cooked) product and is provided **per average portion** for a primary school pupil and per 100g. Having the per 100g means that the portion can be scaled up or down to meet the pupils needs.

For example, a child with diabetes may need the portion altering, so the supporting adult can calculate the carbohydrates consumed and can administer the correct amount of insulin.

Communication between the kitchen and supporting staff is key to ensure the safety of the child needing to monitor their nutritional intake.

How to maintain accuracy:

- 1) Always use the most up to date version of nutrient counts.
- 2) Ensure the correct recipe is used by cross checking the recipe code (PLU Code) on the nutrient count vs your recipe. Also, ensure that the recipe is followed exactly.
- 3) Follow the **portion size exactly as stated on the nutrient counts**, for main, sides and desserts. If this needs to be changed then the school supporting staff, can use the per 100g data to scale up or down the portion.
- 4) Use electronic scales to measure individual ingredients for a recipe. For example, adding extra potatoes to a recipe will increase the carbohydrate content, which is why it is so important to follow the recipe exactly. Also, regularly check the scales are calibrated correctly.
- 5) Ensure when the dishes are complete the agreed portion size of the dish, sides, and dessert is accurately weighed out, note this down on the double checking form. Cover and label the plate/bowl with the pupil's name ahead of service ready to be provided to the pupil when they arrive.

These figures have been calculated using Saffron Nutrition and are accurate at the date of print. Deviations from the Chartwells standard recipes will result in this information being inaccurate. Recipes may be subject to change. A portion of the recipe should be weighed before consumption to ensure the correct nutrient information applies. Nutrient information is also provided per 100g to allow for nutrient calculations in the instance that the portion size differs from that stated. Please contact a member of the Chartwells Nutrition Team if you have any queries.

NOTIFICATION OF CHANGES TO THE NUTRIENT COUNTS – SPRING SUMMER 2024

This can happen throughout the menu cycle due to several reasons including a change in supplier, a product switch, or a recipe change.

We will ensure that the updated nutrient counts are shared with you and displayed clearly below.

<u>RECIPE CODE</u>	<u>RECIPE NAME</u>	<u>REASON FOR CHANGE</u>	<u>PAGE NUMBER</u>

These figures have been calculated using Saffron Nutrition and are accurate at the date of print. Deviations from the Chartwells standard recipes will result in this information being inaccurate. Recipes may be subject to change. A portion of the recipe should be weighed before consumption to ensure the correct nutrient information applies. Nutrient information is also provided per 100g to allow for nutrient calculations in the instance that the portion size differs from that stated.
